

Certificates of Excellence Awarded!

Marietta Water's Office of Environmental Compliance monitors 286 commercial customers in our service area for the proper maintenance and disposal of fats, oils and grease produced by their businesses. Without proper removal and disposal the fats, oils, and grease (F.O.G.) would enter the sewer system causing blockages and sanitary sewer overflows. These overflows degrade the quality of our environment and increase costs for fines, clean up and maintenance of pipes.

After five years of monitoring, three of these businesses stand above the rest. These three provide an example to others in maintenance, record keeping and reporting requirements. They have consistently maintained their grease traps on schedule, kept excellent records and reported to our office on schedule for three years straight. No repeat inspections or reminders have been necessary. This is impressive considering our office completes 800 – 1000 inspections per year on these businesses to gain compliance for F.O.G. control ordinances.

These three businesses are:

- 1) Le Café Crepe 90 Marietta Station Walk
- 2) Cracker Barrel #30 2150 Delk Road
- 3) Arbys #5909 1120 Powder Springs Road

We thank these customers for promoting and protecting a healthy environment for the citizens of Marietta and making all of our jobs a little easier here at Marietta Water.
